Paul Graham

ELR is completing a Planning and Environmental Linkages (PEL) study for the Harvey Road Connector project on behalf of Wayne County Commission and KYOVA. This will be one of the first PEL studies completed in West Virginia. The PEL study will incorporate NEPA like key decision points in order to effectively and efficiently advance NEPA decision-making requirements when funds become available to move the project into the NEPA phase. As such, the study includes project scoping, goal and objectives, alternatives identification and analysis, stakeholder and public involvement, and a final report.
