Project Cost:

\$2 Million Construction

\$2 Million Design

Year Completed:

March 2020 Construction

May 2019 Design

E.L. Robinson's Role

Prime Consultant

Water Design

Construction Inspection

The Harts Run Waterline Extension Project will extend water service to approximately 50 residential customers, the Greenbrier State Forest, a UPS Distribution Center, and the WV Great Barrel Company Plant.

The existing system in this area belongs to the Greenbrier State Forest and needs an upgrade from a sustainable source. The proximity of the City of White Sulphur Springs water system makes supplying this area feasible and cost-effective.

Greenbrier County was one of the main areas affected by the flood of 2016, causing major negative impacts on the community and halted economic growth. Projects like this will strengthen the existing infrastructure and establish the groundwork for future economic development.

The project includes approximately 23,650 linear feet of distribution line, 25 valves, 50 meters, six (6) hydrants and other appurtenances. The city's existing plant will supply all water for this project.
